RE: Certification Application
FCC ID: XVD40019
15.19 Statement

To whom it may concern,

Please find attached to this letter photos of the device for which we are seeking certification. As the device is intended to be used, it is attached to the end of a 2" or 2-1/2" diameter hose and it is used to blow fiberglass insulation into attic spaces. Typically, this transmitter is being used in the attic of a home and the insulation blowing machine is located outside the home. The hose is 100 to 150 feet in length and is very inflexible. Consequently, the hose, with the transmitter attached is typically dragged though the construction site as it is deployed and stored. This subjects the transmitter to substantive abuse.

The transmitter enclosure was made relatively small and tapered to facilitate pulling through construction sites without snagging on obstructions and damaging the transmitter. Additionally, the identification labeling is located in a recess for protection. Unfortunately the 15.19 statement will not fit on the label. Any additional labeling that we add may not survive when the product is in use, and therefore we request a waiver from placing the 15.19 statement on this transmitter. We will, however; prominently place the statement in the user manual.

Thank you for your attention to this matter.

Regards,

Christopher M. Relyea
President
